

Quick Start Guide

Cooking Configurations

GRILLING & SEARING

Direct Cooking
one zone

Use this configuration for grilling meat such as steaks, chicken breasts, or any foods that benefit from cooking directly over the charcoal fire.

GRILLING & ROASTING

Direct & Indirect Cooking
two zones

Use direct and indirect cooking zones to grill meat on the direct side, while roasting tender foods like seafood & vegetables on the indirect side.

BAKING, ROASTING & SMOKING

Indirect Cooking
one zone

Use this configuration for indirect cooking such as an oven or smoker. Cook at low to medium temps for baking pizza or smoking meat.

(Heat deflectors/racks required)

Cooking Instructions

Lighting

1. Build a mound of natural lump charcoal. Use a full fire box of charcoal for smoking and searing temperatures or half a fire box of charcoal for two-zone cooking.

2. Light the charcoal with a fire starter cube or two. You can also use a chimney starter or electric starter. Leave the dome open.

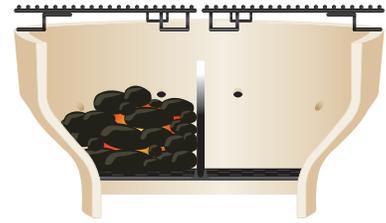

3. Wait 5-10 minutes for the charcoal to build a small bed of embers.

4. Close the dome, then fully open the draft door and the top vent by sliding the top disk all the way to the right.

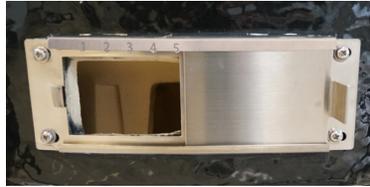

Adjust the air flow as needed as the temperature rises to reach your target temperature. For grilling, you can set the draft door to fully open and regulate the temperature with the top vent. For roasting set the draft to one-third open.

full firebox

half full firebox

lower draft door fully open

open top vent

LIGHTING TIPS

 Charcoal can be relight 2-3 times for multiple cookings. Use the ash tool to stir the used charcoal, so the ashes will drop through the fire grate. Add 30% new charcoal to the existing charcoal and build a new mound. This works well for roasting and grilling temperatures.

 You can't have too much charcoal, but you can have too little.

 **NEVER** use lighter fluid or any other combustible liquid to light the charcoal. It will be absorbed by the ceramics and impart a fuel taste to your food.

Temperature control

1. When you are 25°F (14°C) from your target temperature, close the top vent down to one-third open.

2. Wait 1-2 minutes then increase or decrease the air flow of the top vent in ¼" increments to regulate the temperature. A ¼" can change the temperature up or down by as much as 25°F (14°C).

It's very easy to raise the temperature, but very difficult to lower it. For low temperatures, allow it to rise slowly.

Low temp cooking/smoking

1. For low temperature cooking, 225°F (107°C), start with a very small fire in one area of the charcoal

2. Close the dome after 5 minutes with the draft door and top vent fully open. Allow the temperature to come up slowly and when it reaches 200°F (93°C), set the draft door to position 3, set the precision control top to position 3. Adjust the vent controls as needed to maintain target temperature.

Internal Temperature Guide

The USDA recommended internal temperature for chops, roasts, & steaks is 145°F+ (63°C). Internal temperature for ground meat is 160°F+ (71°C).

Beef, veal & lamb (roasts, steaks) 	Extra-rare	115-120°F	46-49°C
	Rare	125-130°F	52-55°C
	Medium-rare	130-140°F	55-60°C
	Medium	140-150°F	60-65°C
	Medium-well	150-155°F	65-69°C
	Well-done	160°F+	71°C+

Beef, veal & lamb (ground) 	Medium-Well done	140-160°F	60-71°C+
Poultry (whole, or pieces) 	Well done	160°F+	71°C+
Pork (chops, ground, roast, steaks) 	Medium-Well done	140-160°F	60-71°C+
Seafood (fish, crab, lobster, shrimp) 	Cook until the meat is opaque & firm		

Always rest meat after cooking

During the cooking process, the natural juices in the meat are forced to the center. Resting meat after it is removed from the grill gives the juices time to redistribute more evenly throughout the meat, and reduces the amount of bleeding when it is cut. Allow beef, lamb, poultry, and pork to rest on a plate and cover loosely with aluminum foil. The larger the cut the longer the rest. For example, a steak should be rested 3-5 minutes, while a whole turkey should rest for 20-30 minutes.
